WORK EXPERIENCE

Software Development Engineer Intern

Amazon Robotics

Toronto, Canada

August 2025 – December 2025

- Built a pod stability analytics dashboard using React and TypeScript, visualizing real-time distributions with box-and-whisker plots to accelerate robotics diagnostics.
- Implemented a bin restriction removal workflow, building a React frontend and Java AWS Lambda backend to safely update production records in DynamoDB.
- Designed a pod damage image ingestion pipeline, validating uploads via Amazon Rekognition and persisting images and metadata to S3 and DynamoDB.
- Enabled analytics and reporting by publishing deletion records to a data lake via Amazon Kinesis and querying with Amazon Athena.
- Defined and deployed infrastructure using AWS CDK (TypeScript), ensuring reliable, observable, and fault-tolerant service integrations.

Software Development Engineer Intern

Amazon Robotics

Toronto, Canada

January 2025 – May 2025

- Rebuilt a critical stability history reporting system, designing a scalable backend using AWS EventBridge, SQS, Lambda, and DynamoDB.
- Built services to aggregate real-time pod stability and bin mass metrics, enabling operational visibility across fulfillment centers.
- Cut end-to-end latency by over 50% versus the legacy pipeline, accelerating debugging of high-severity robotics incidents.
- Improved data freshness and reliability by implementing scheduled refresh workflows and resilient post-processing for delayed data.

Software Developer Intern

Angler Solutions Inc.

St. John's, Canada

May 2024 – August 2024

- Built and maintained full-stack features using Vue, TypeScript, FastAPI, and PostgreSQL, streamlining internal system workflows.
- Improved system accuracy by 50% by diagnosing and fixing data transmission issues across frontend and backend services.
- Developed a secure password recovery flow using Nuxt and FastAPI, contributing to 99.9% system uptime and improved user trust.

Intern Full Stack Developer

Bluedrop ISM

St. John's, Canada

August 2023 – December 2023

- Built user analytics and metrics tracking covering 96% of platform activity for 1,000+ users using React, JavaScript, and Grafana, enabling data-driven product decisions.
- Developed and integrated RESTful APIs with Node.js, Express, and PostgreSQL, improving data access patterns and application performance.
- Improved platform reliability by identifying and fixing critical bugs, reducing downtime by 20%

PROJECTS

Soft Step (Mobile App): Developed an app for Parkinson's patients that provides personalized exercise plans and notifications to reduce condition progression by 35% (Java, SQLite, Firebase).

Carbon Repay (Web App): Built a full-stack application to track and reduce vehicle carbon emissions by 20% for users and businesses (React, Node.js, Express, PostgreSQL).

TripTailor (Web App): Developed a microservices-based platform for sharing and exploring travel itineraries, enhancing trip planning efficiency (Go, React, PostgreSQL, OAuth2, Docker).

Navigator: Built an accessibility-first campus navigation app with dynamic routing, real-time issue reporting, and offline support (Java, Spring Boot, PostgreSQL/PostGIS, Docker, AWS, React Native).

EDUCATION

Memorial University of Newfoundland

Bachelor of Engineering Co-op Program – Computer Engineering

St. John's, Canada

September 2020 – May 2026

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, Go, SQL, C/C++, C#

Technologies: Spring Boot, React, Node.js, FastAPI, PostgreSQL, DynamoDB

Cloud & Tools: AWS (Lambda, S3, DynamoDB, Kinesis, Athena, EventBridge), Docker, Git, Linux, CI/CD, Grafana
